

TOGETHER, WE CARE FOR YOU

Cardiopulmonary care team

CARDIAC REHABILITATION

Focuses on the function of the heart in order to maintain the other body systems. It addresses heart dysfunction in the presence of certain illnesses or diseases and following cardiac events such as heart attack or surgery. Rehab ensures the heart is functioning properly and responding to the demands placed upon it by work, play and everyday activity. The goal of cardiac rehab is to add more quality days to your life.

PULMONARY REHABILITATION

Focuses on exercise, education, and support to help you breath and function at the highest level possible. You will learn how to manage your lung disease so that you can reach your maximal potential of activity tolerance. The goal of pulmonary rehab is to add more quality of life to your days.

Exercise Physiologist

Kyle Lewis,
MS, EP

- Cardiac Rehabilitation
- Stress Testing
- Event & Holter Monitor
- Pulmonary Rehab
- Coronary Artery Disease (CAD)
